

Rehearsable Abstraction

Editable Expansion as a Regime of Implementation

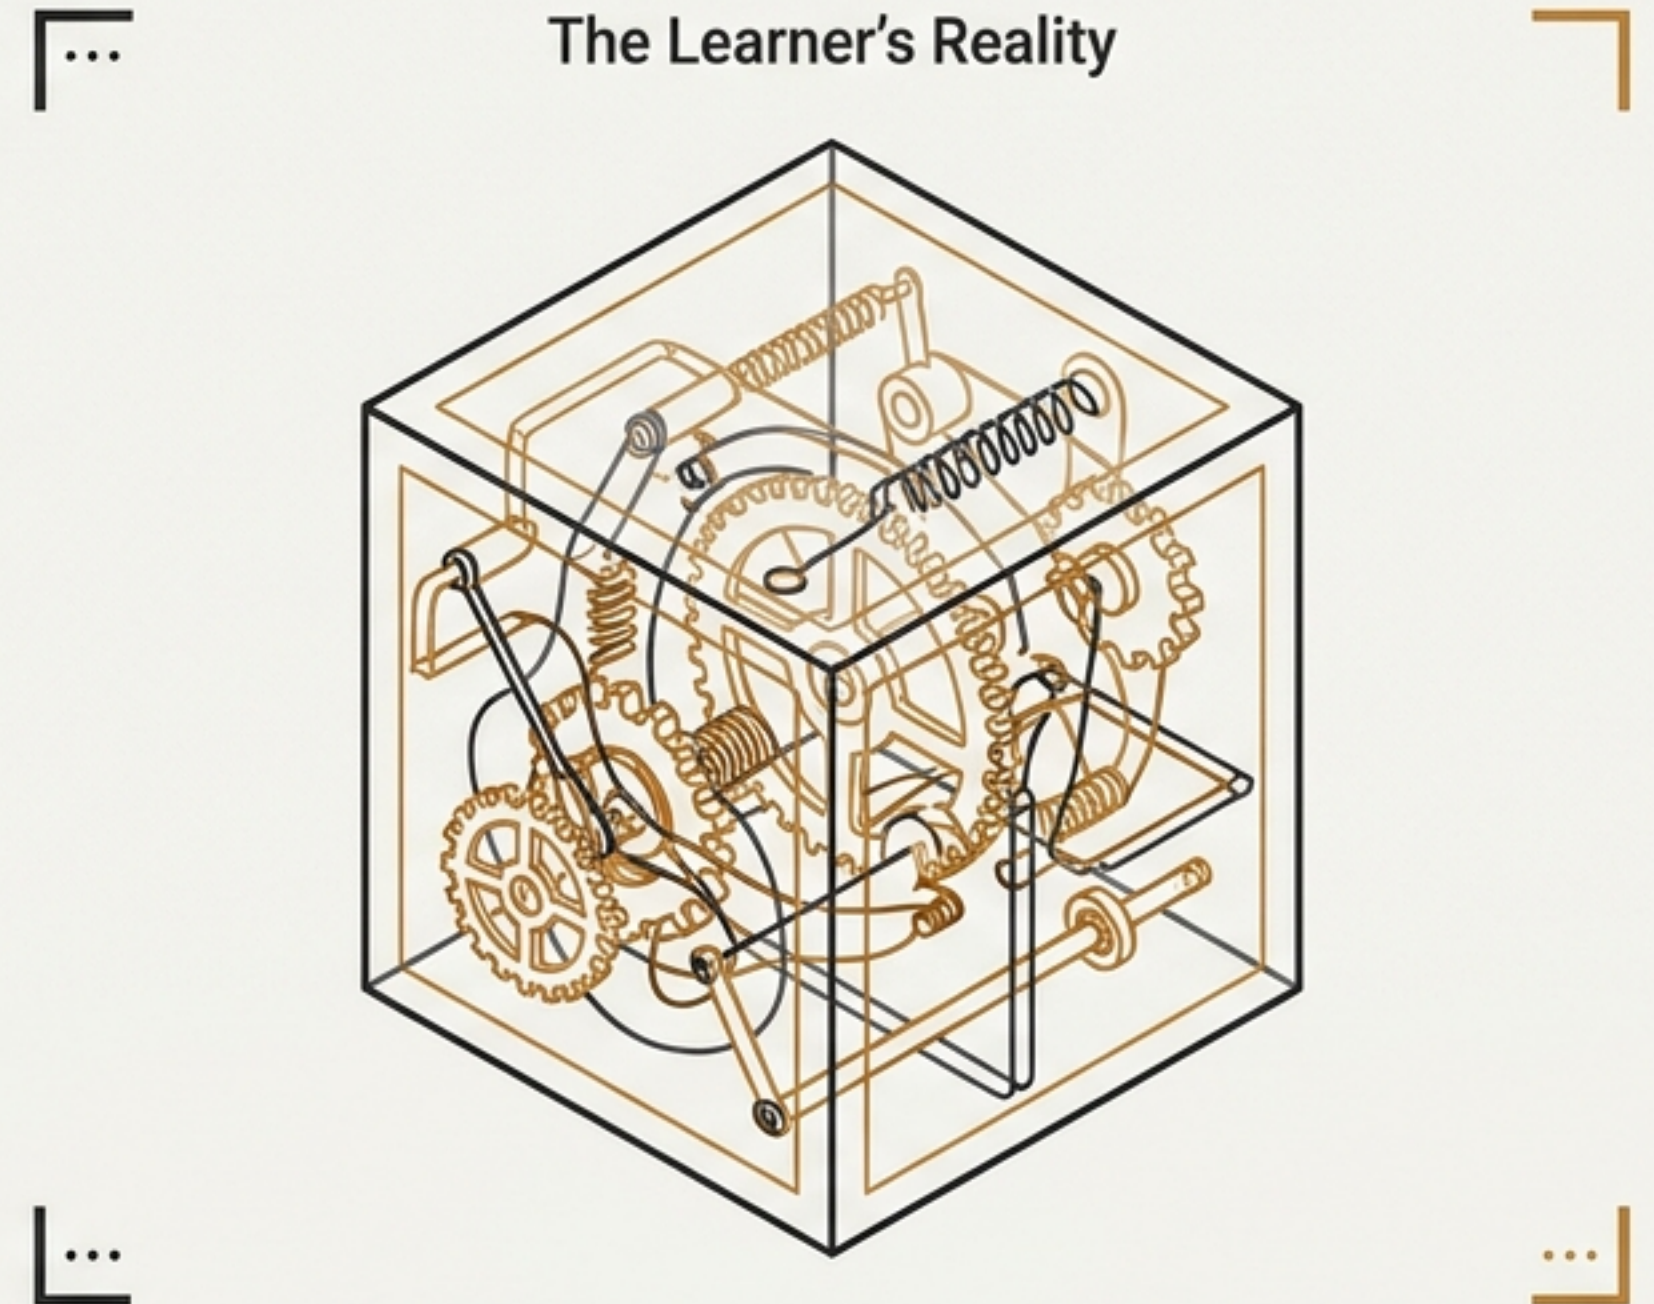

From command-line syntax to the phenomenology of human relationships.

The paradox of the black-box ideal

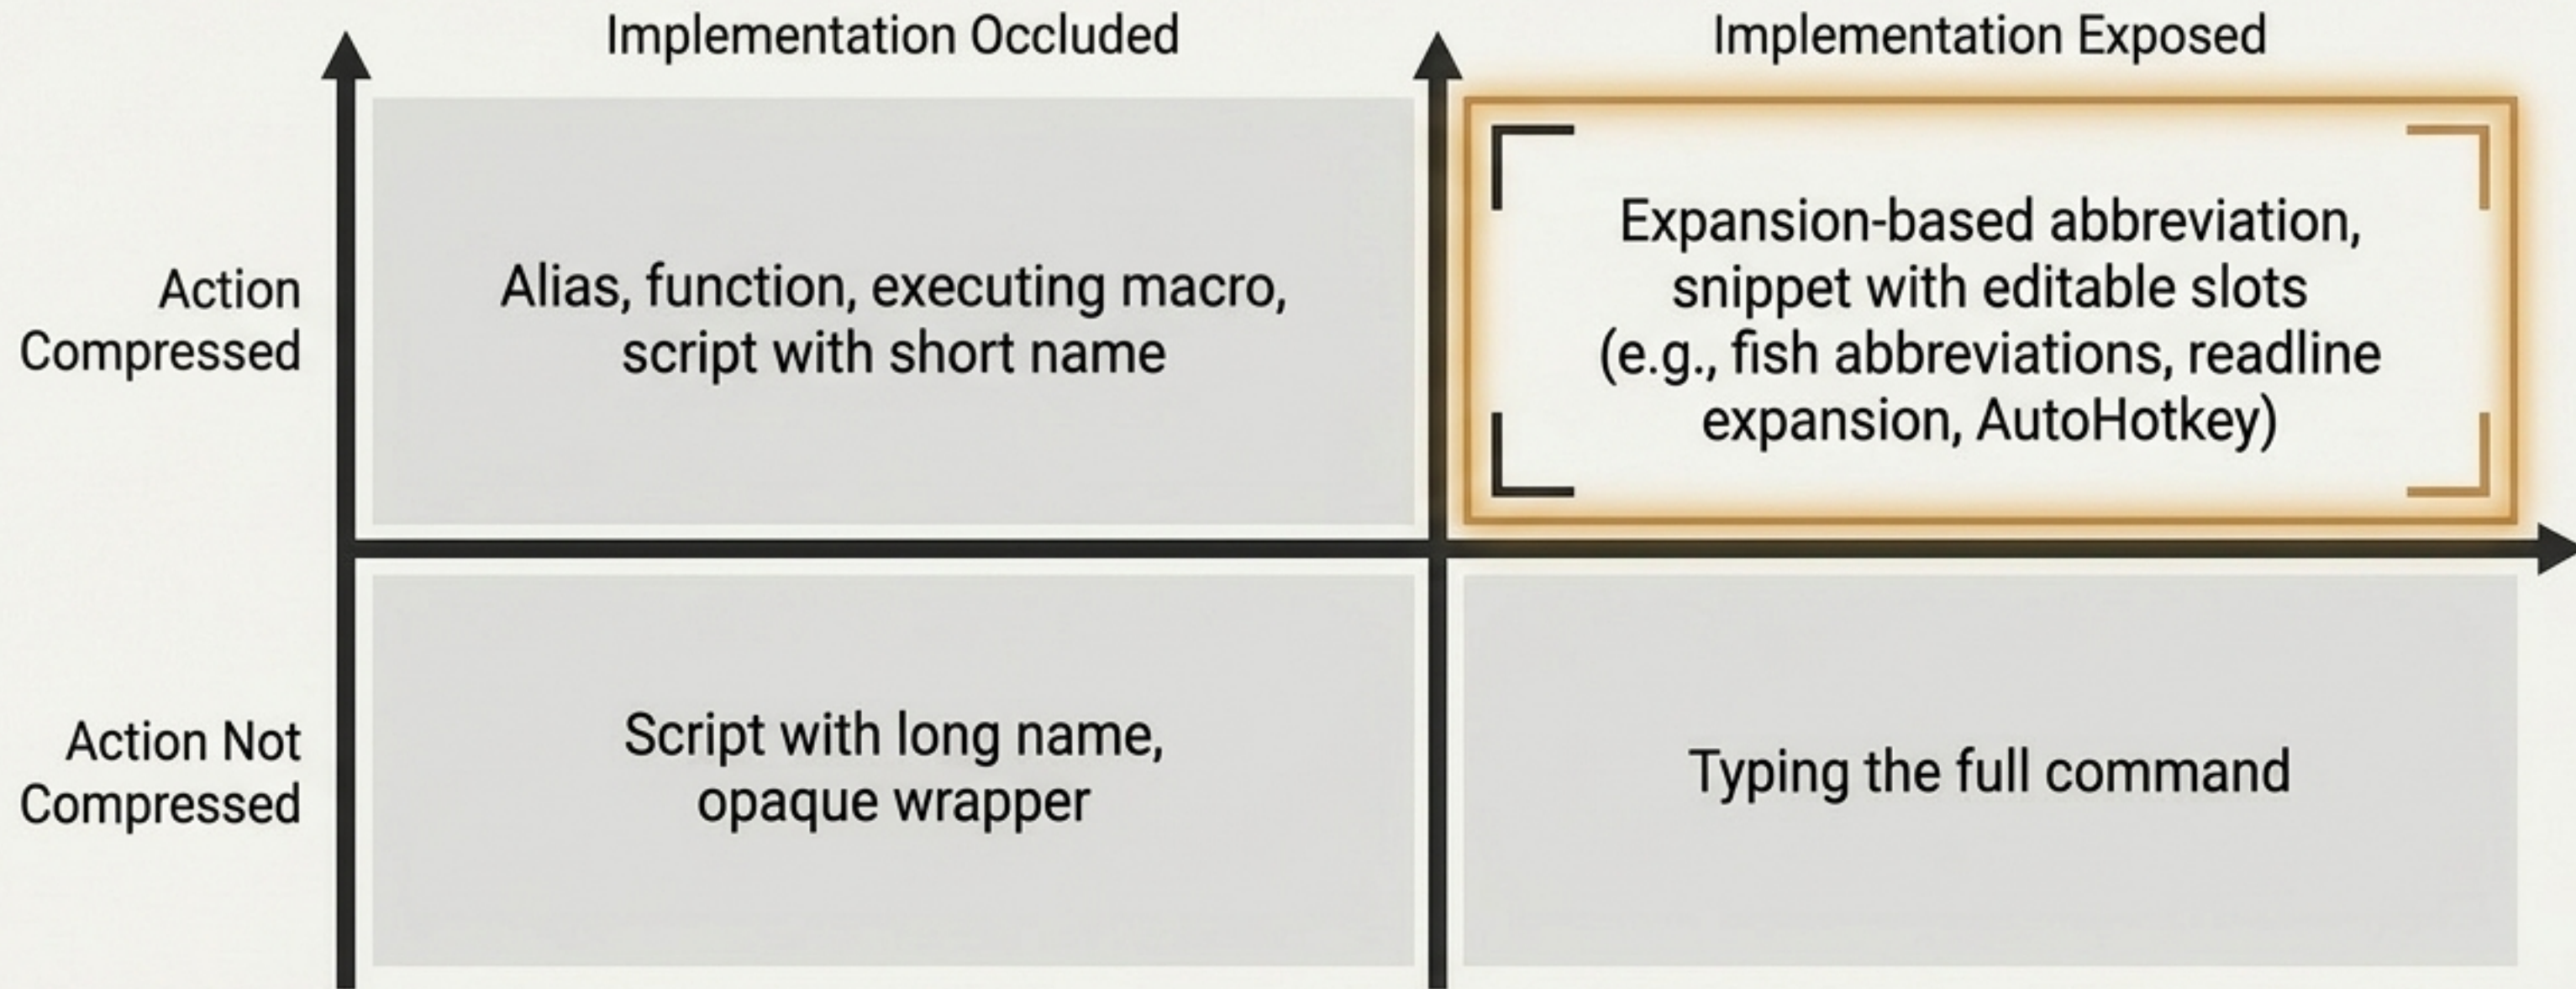

Abstraction is treated as the art of hiding implementation.
Ideal for mastery, detrimental for learning.

A shell alias saves keystrokes but removes the command from view. After 100 uses, the underlying grammar remains unlearned.

Separating compression from occlusion

Takeaway: Conventional abstraction delivers both simultaneously. The top-right quadrant isolates a deliberate design stance: invocation costs less, but implementation visibility is preserved as a feature.

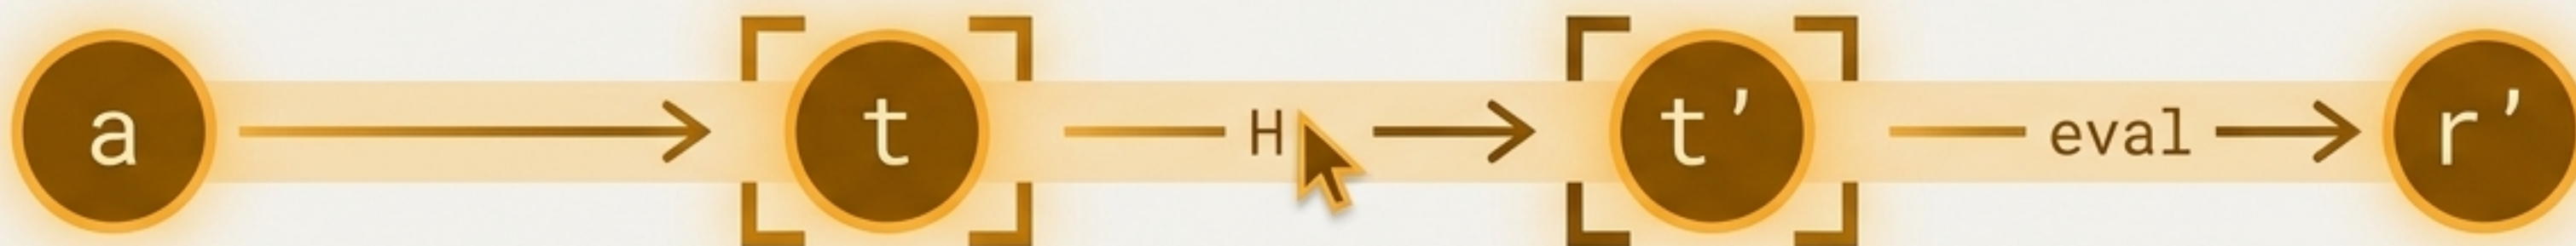

The structure of editable expansion

Bypasses the human directly to execution.

Ordinary Execution

Expansion-Based

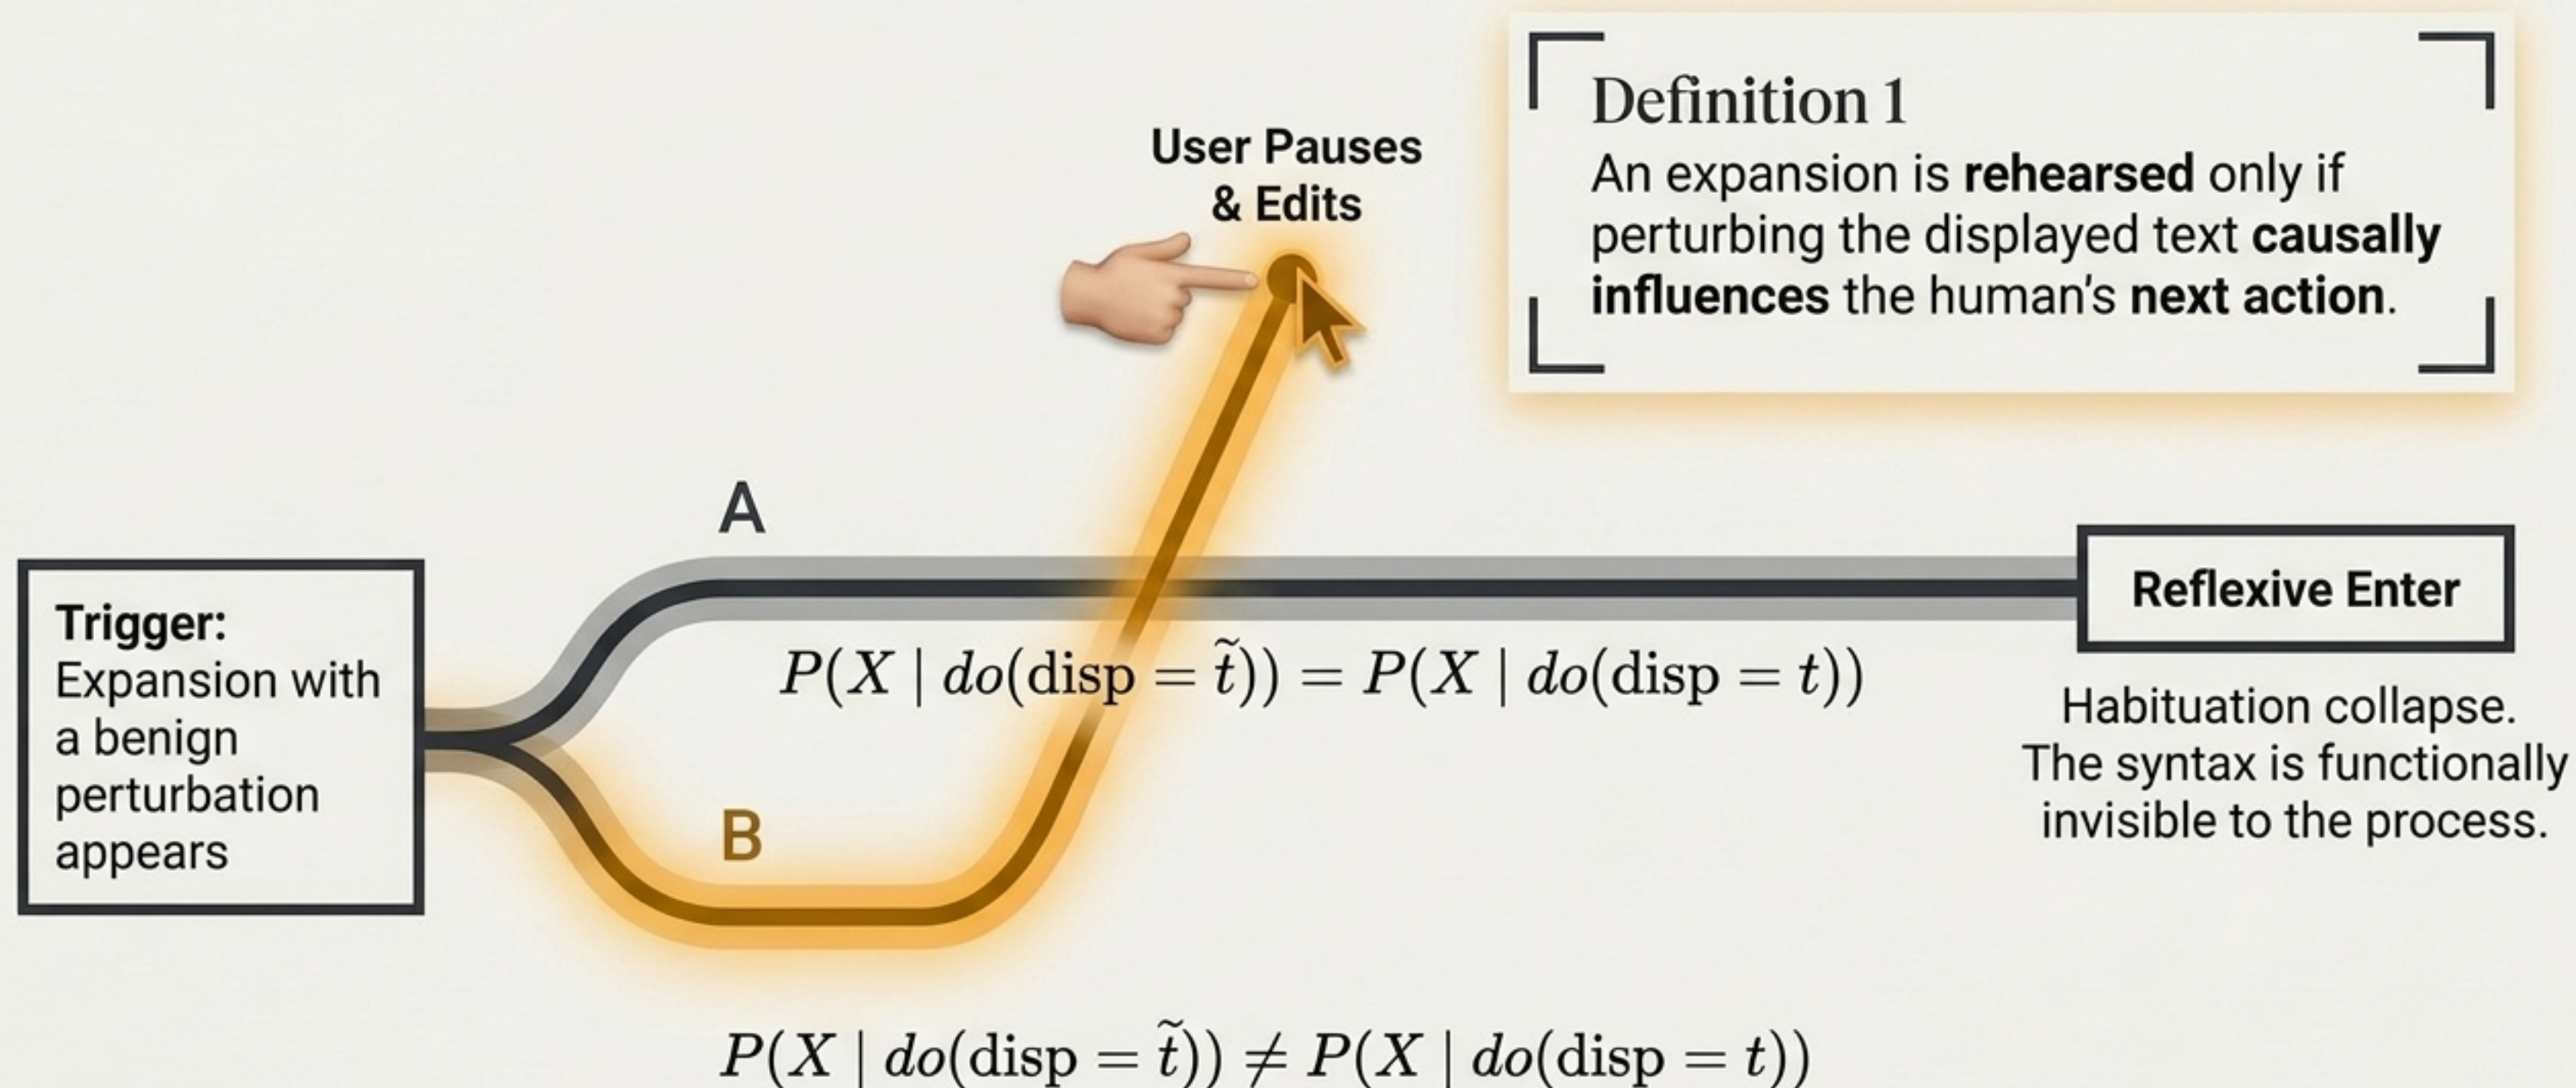

Specialization & Quotation

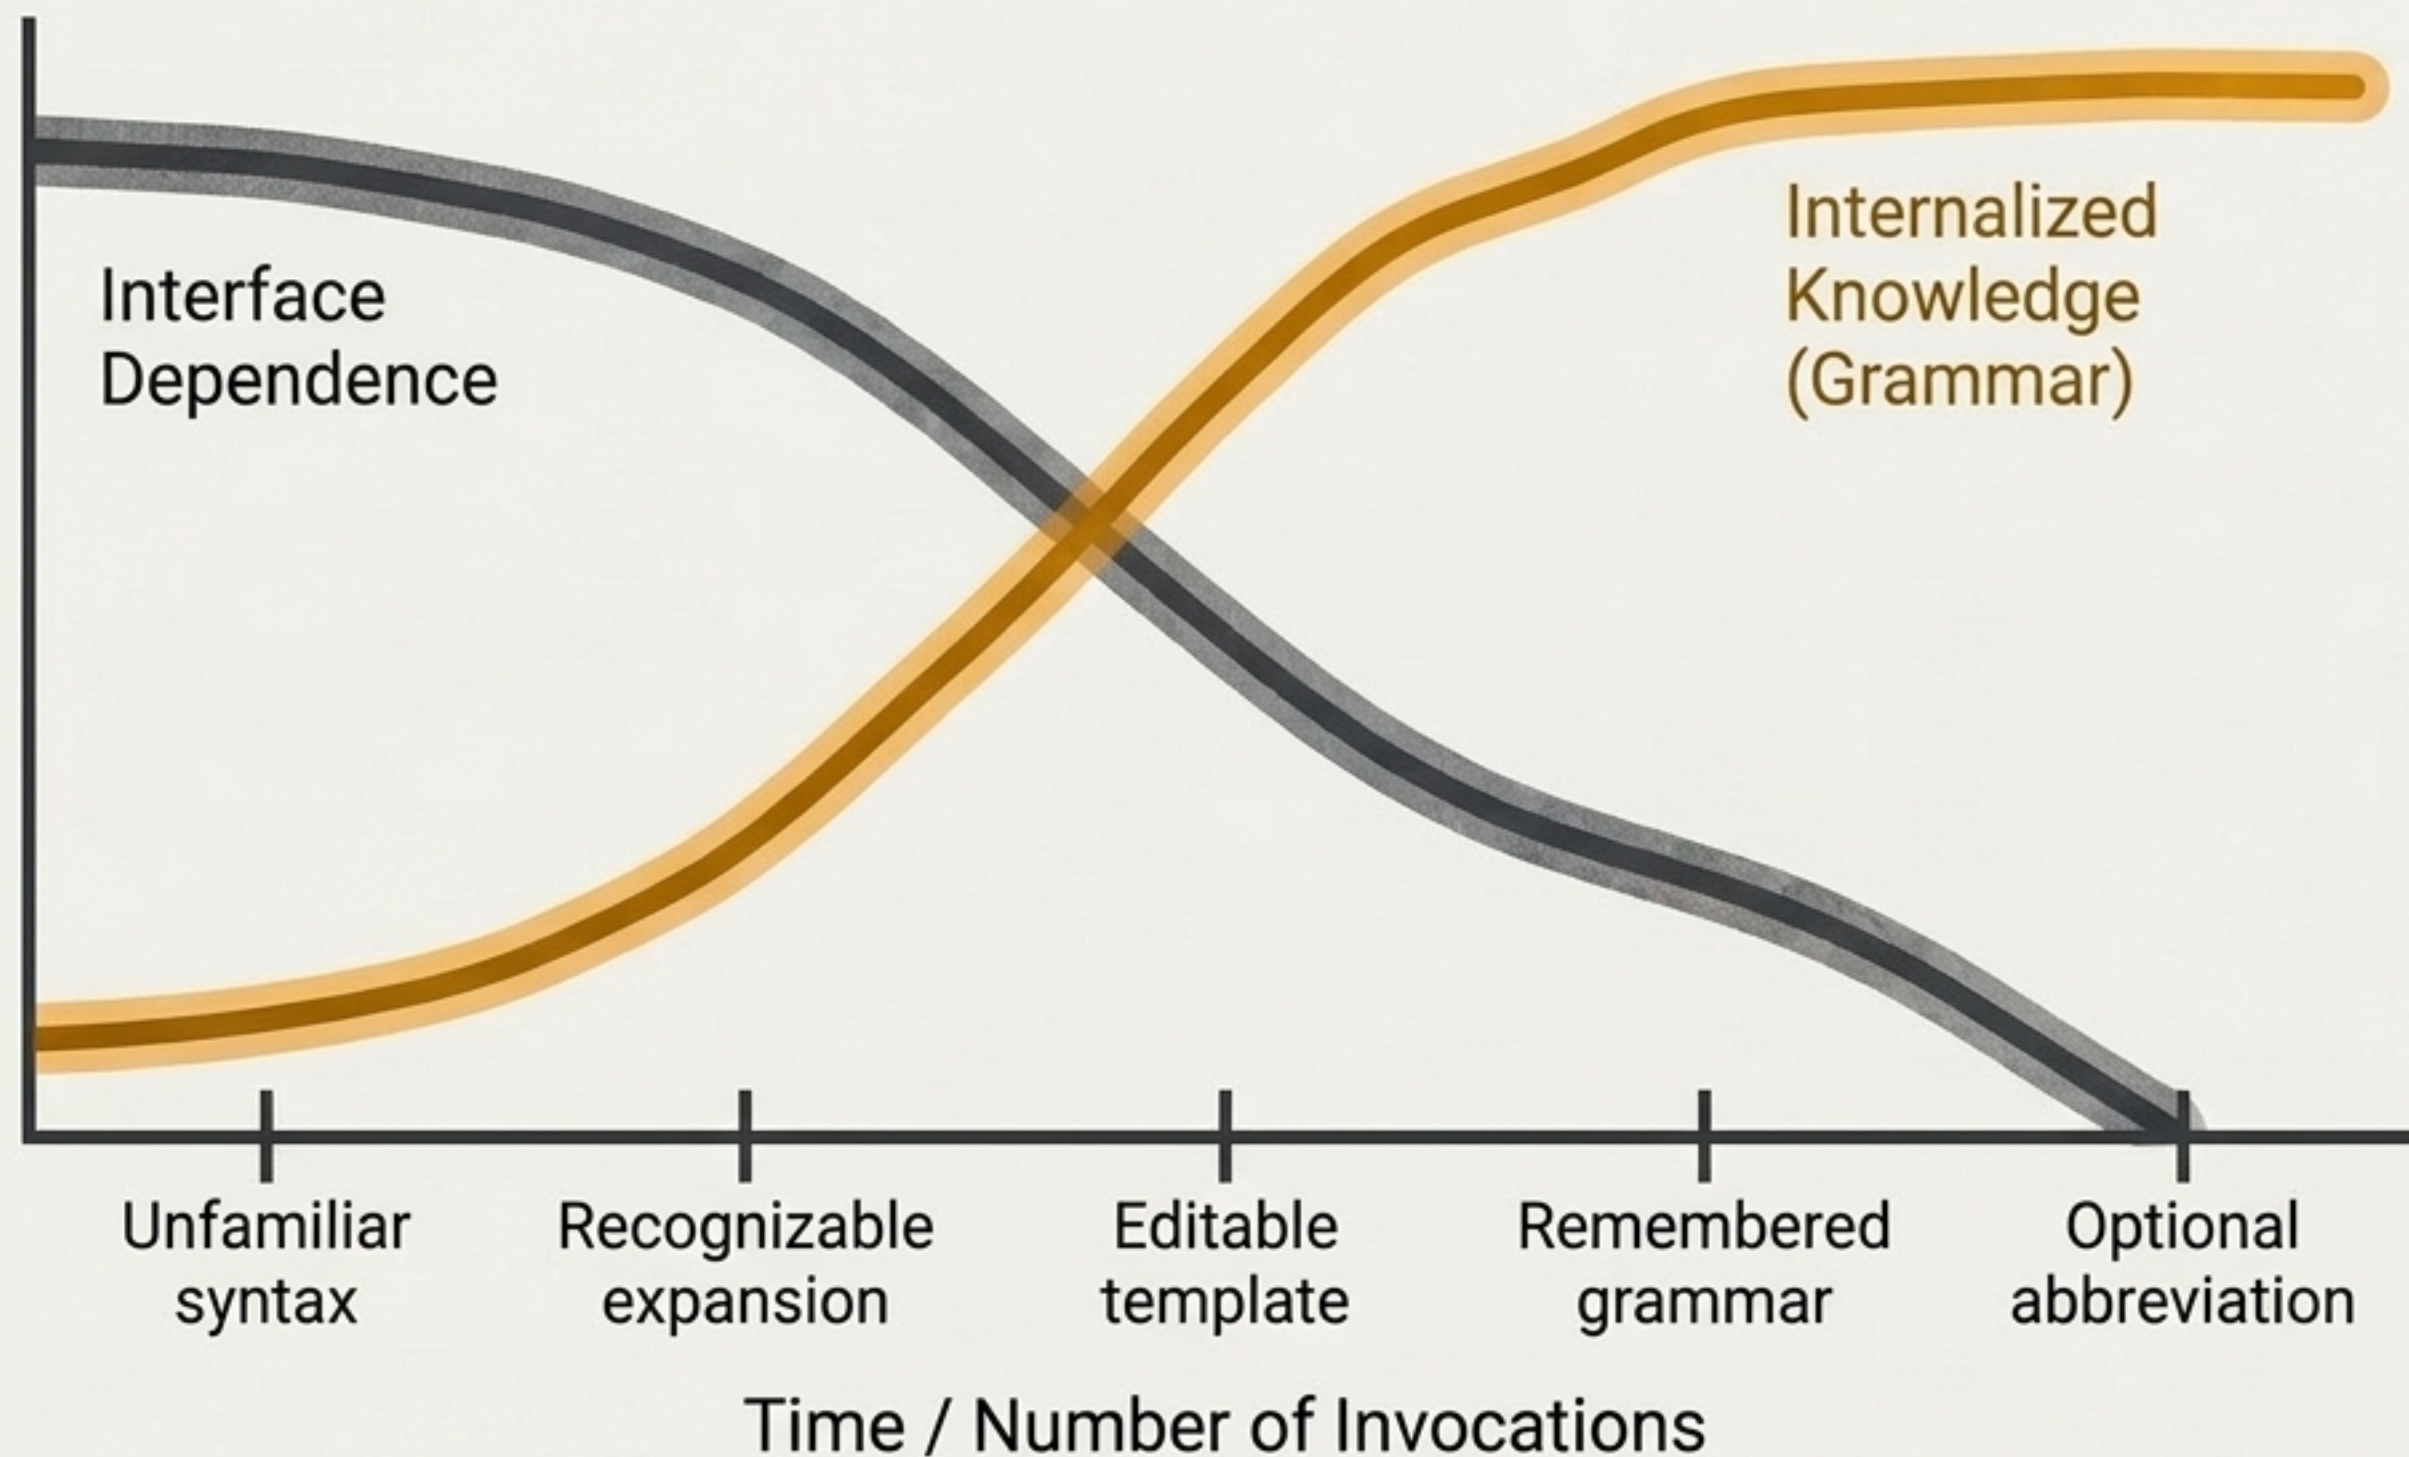

Template

Implementation re-enters the perceptual field as a manipulable object before anything happens.

The interventional test for rehearsal

Success makes the abstraction optional

1. Aliases trap the user in **permanent dependence**.

2. Rehearsable abstractions engineer **their own obsolescence** through incidental rehearsal. The user comes to **own the grammar**.

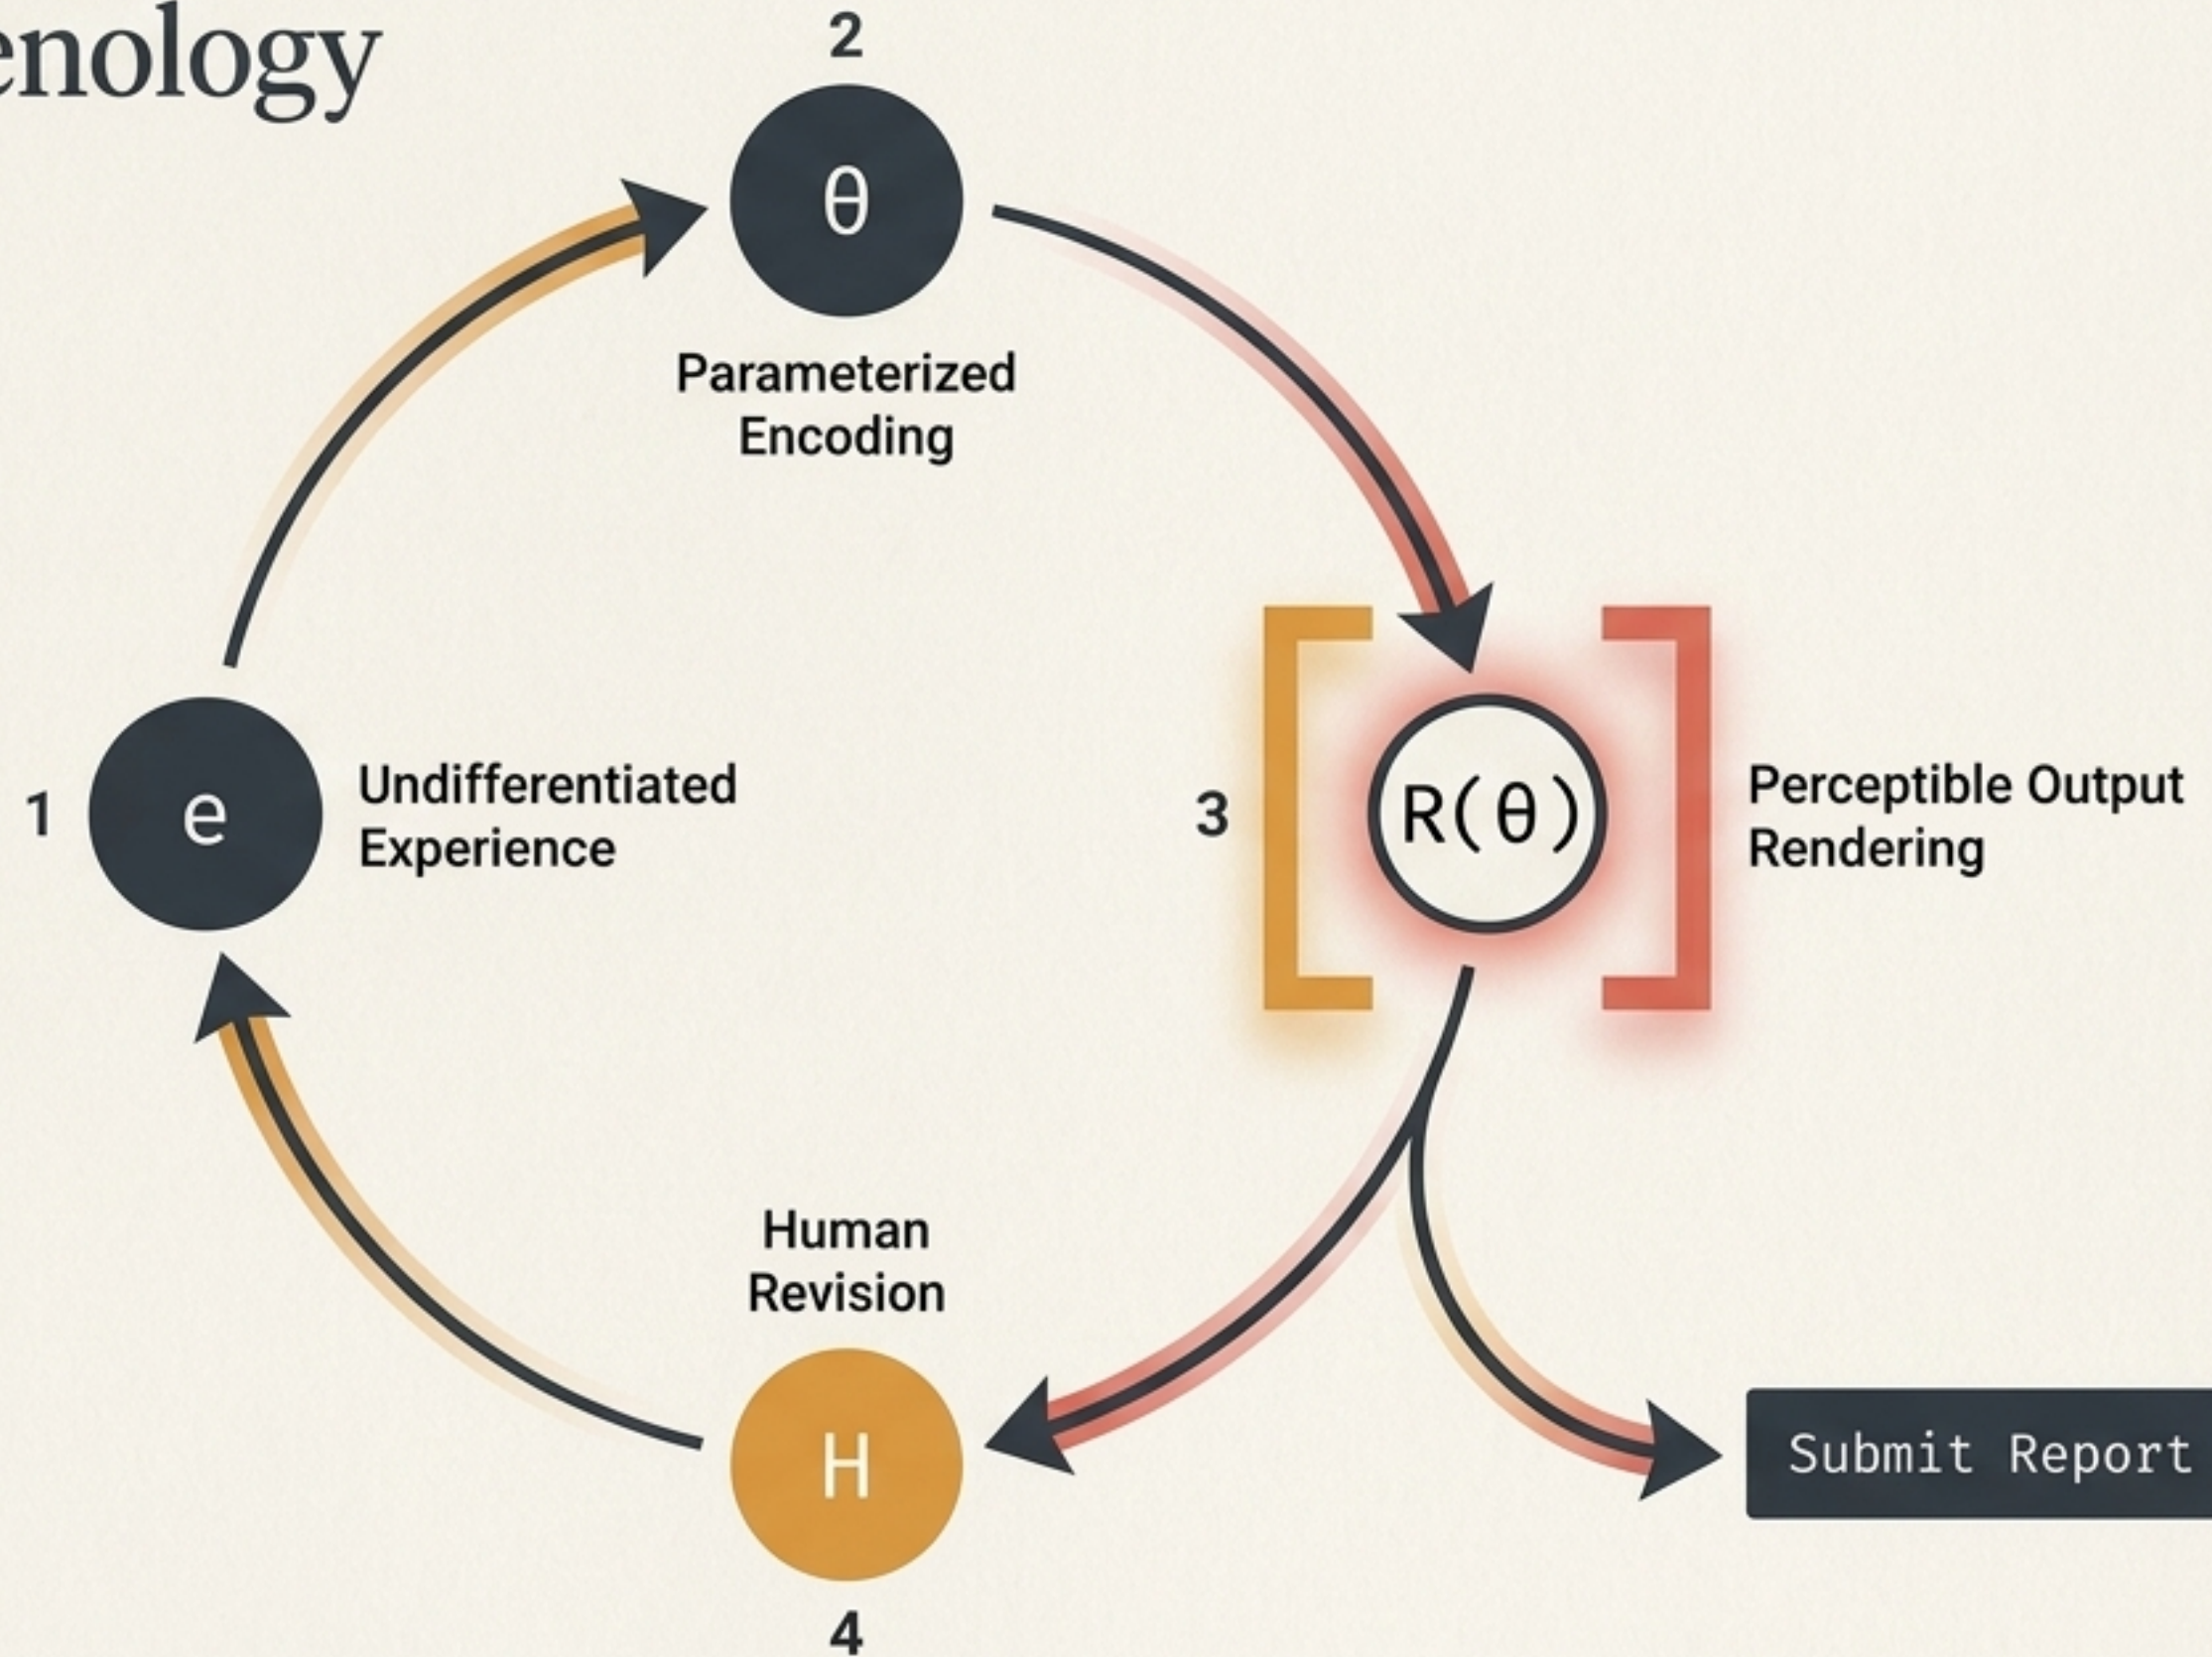

Rendered rehearsal: visual phenomenology

Abstractions need not be linguistic text.

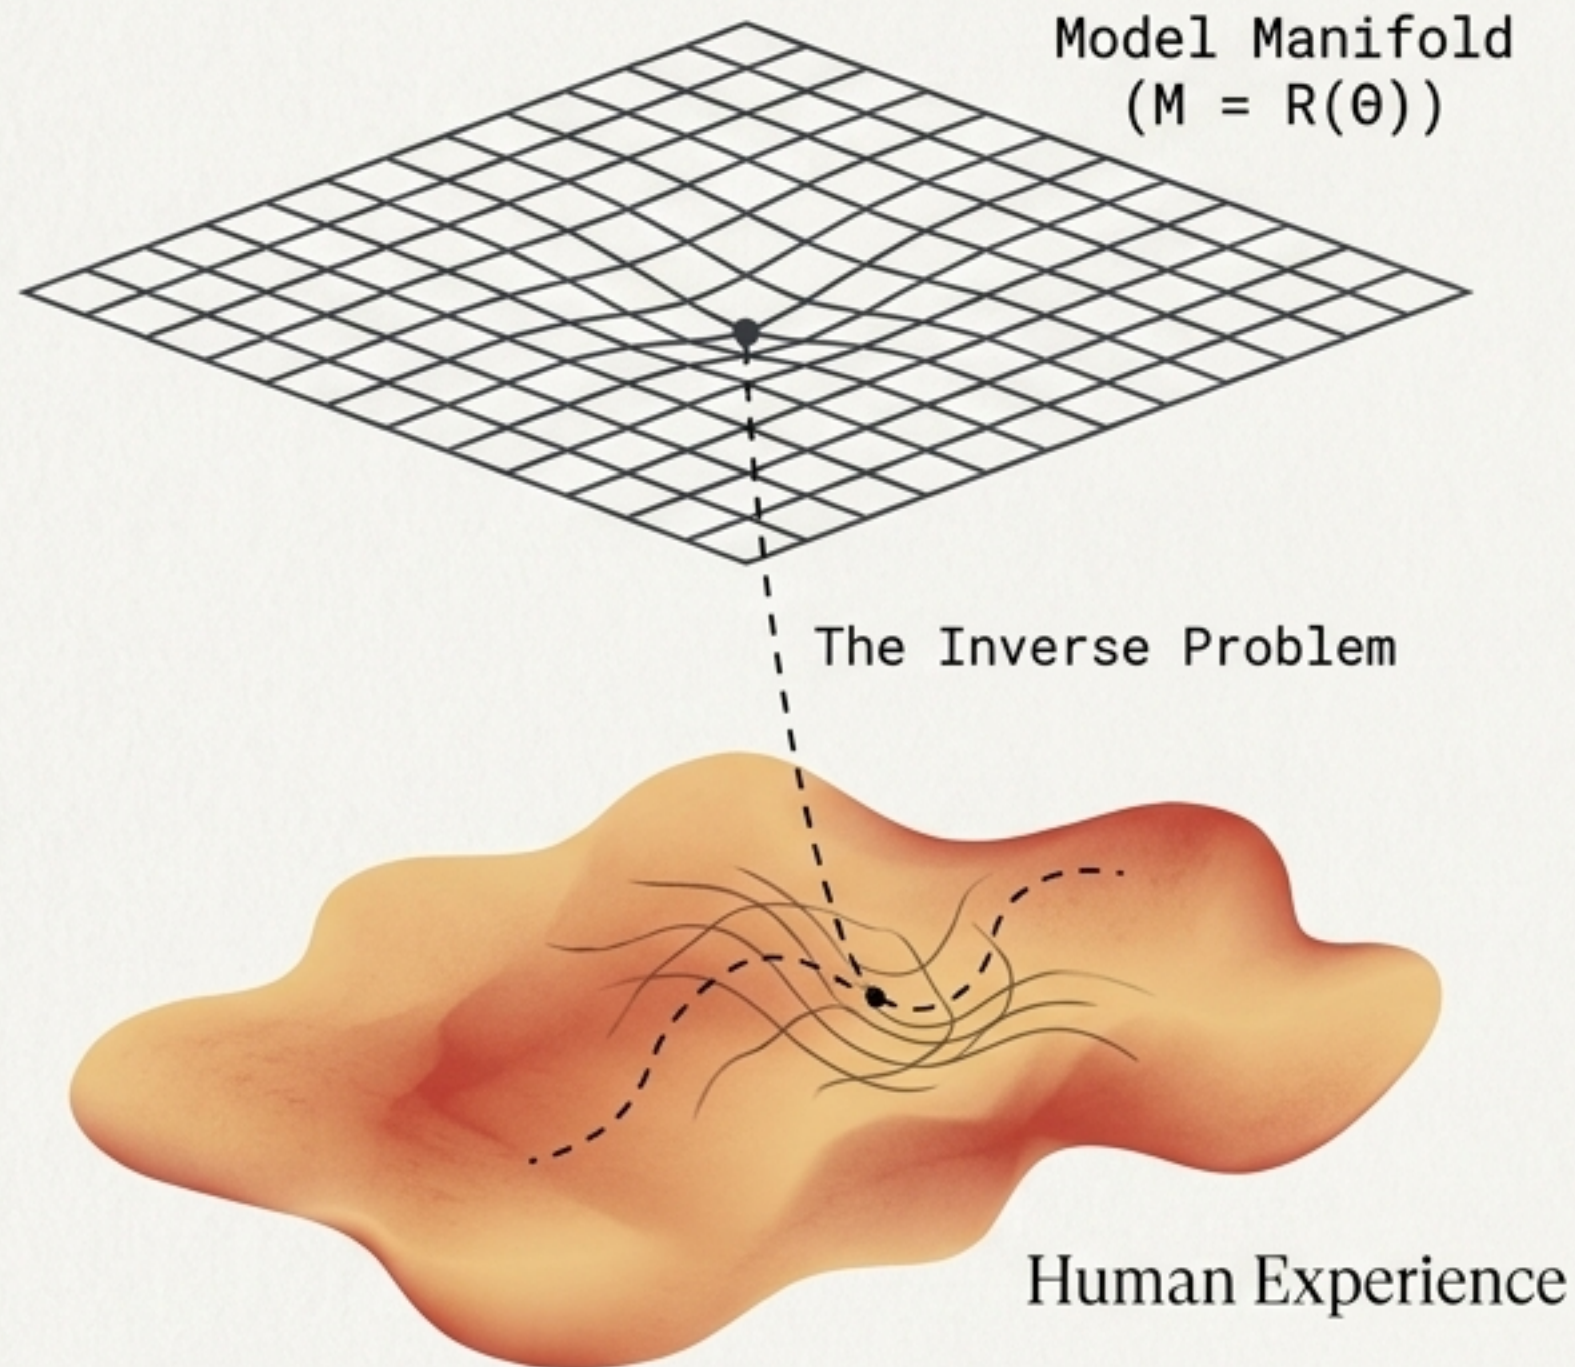

In the Tracer Replication Tool, the rendered visual model plays the exact role of the quoted command line text:

$\lceil t \rceil \leftrightarrow R(\theta)$

Repeated use provides a provisional grammar of experience.

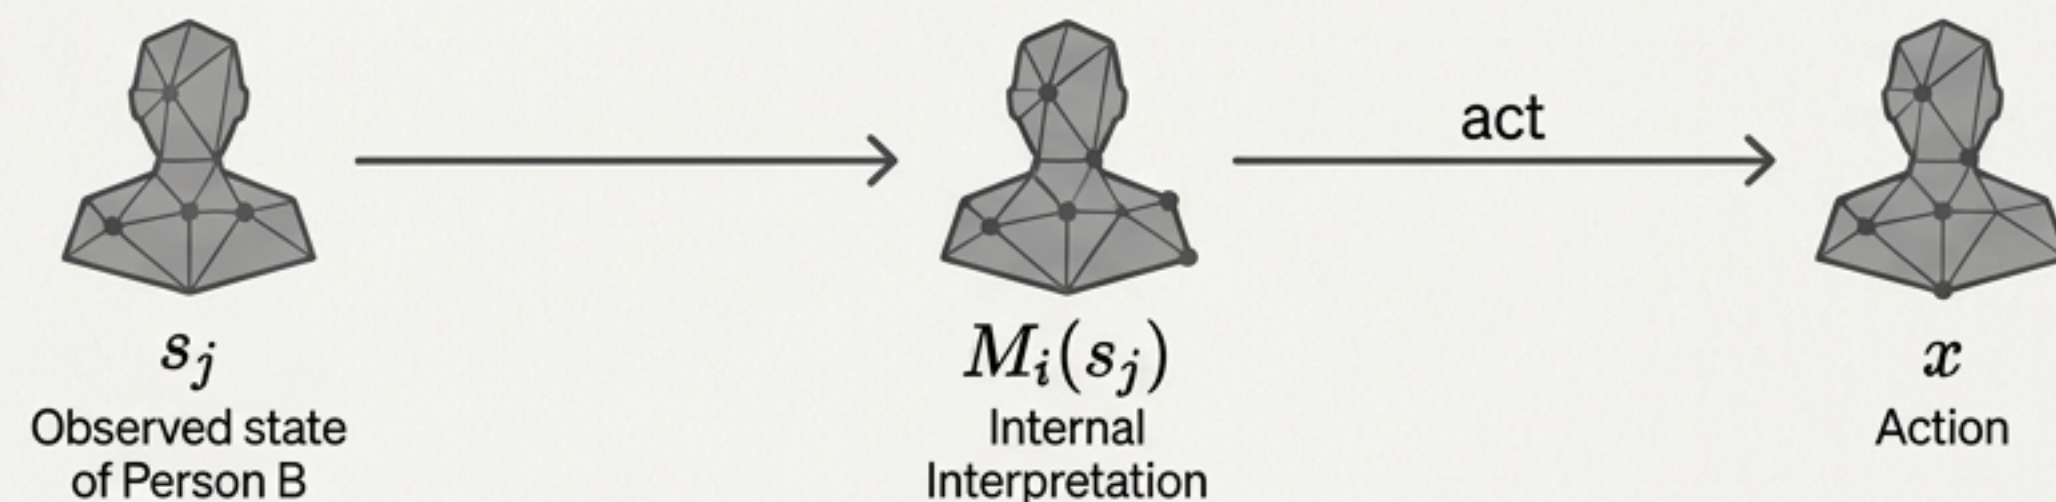

The danger of supplied coordinates

- Different parameters may produce perceptually indistinguishable outputs.
- A fitted replay frequency proves visual resemblance in the tool, not the existence of a replay loop in the nervous system.
- The Hazard: The search may change the perceptual vocabulary by which the target experience is remembered.

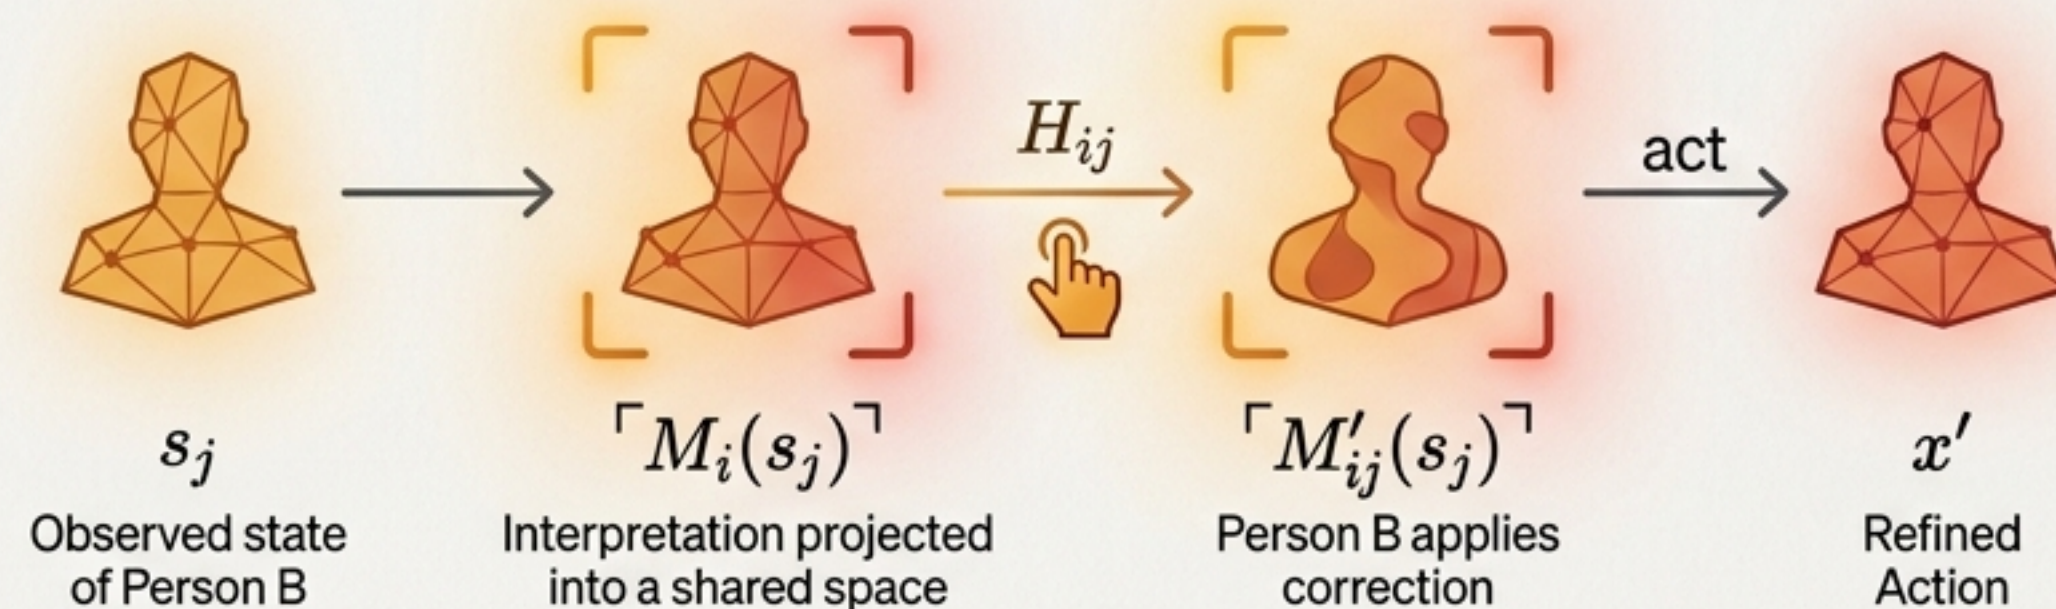

Relational rehearsal

Unrehearsed Action

Interpretation passes directly into action without inspection.

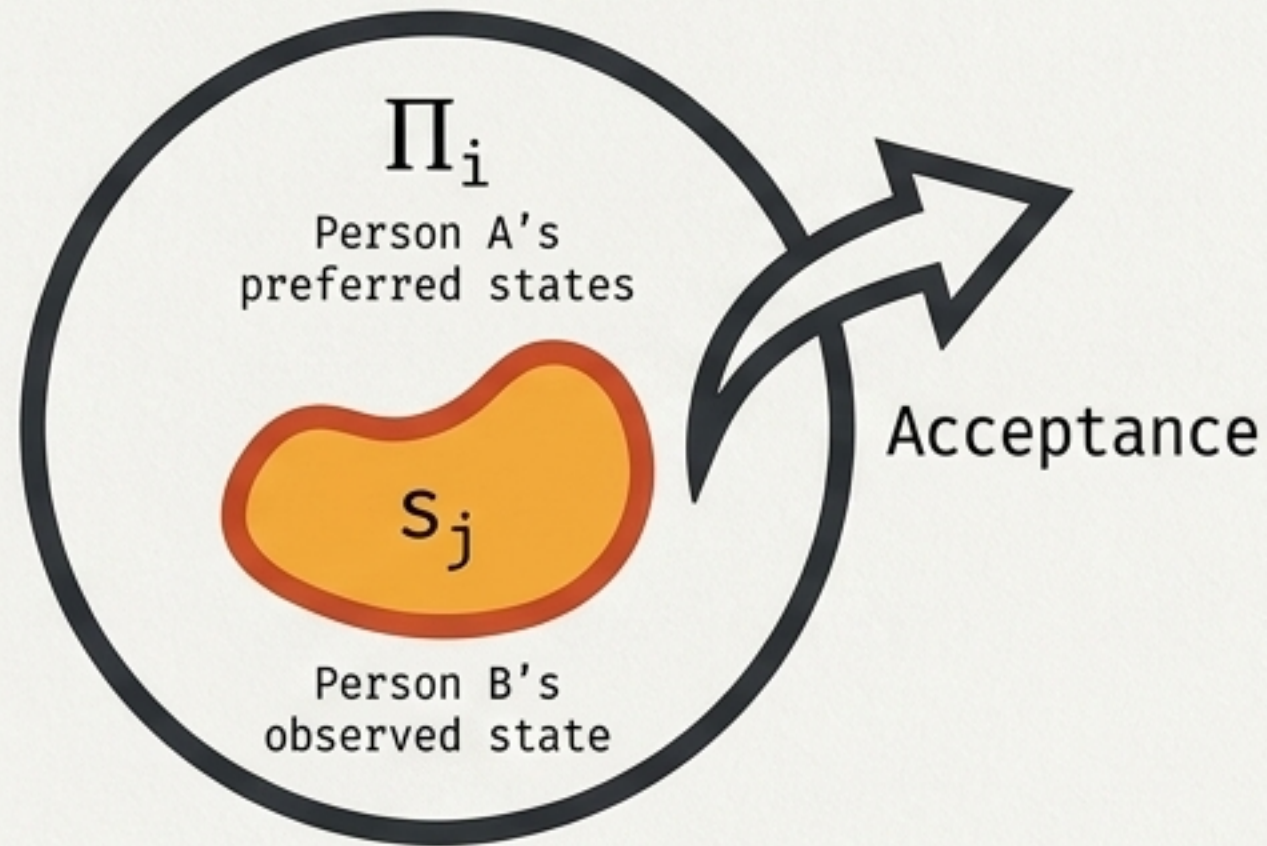

Relationally Rehearsable

Quotation marks here do not reduce a person to a term. They hold the representation apart from the person so it to be mistaken for its object.

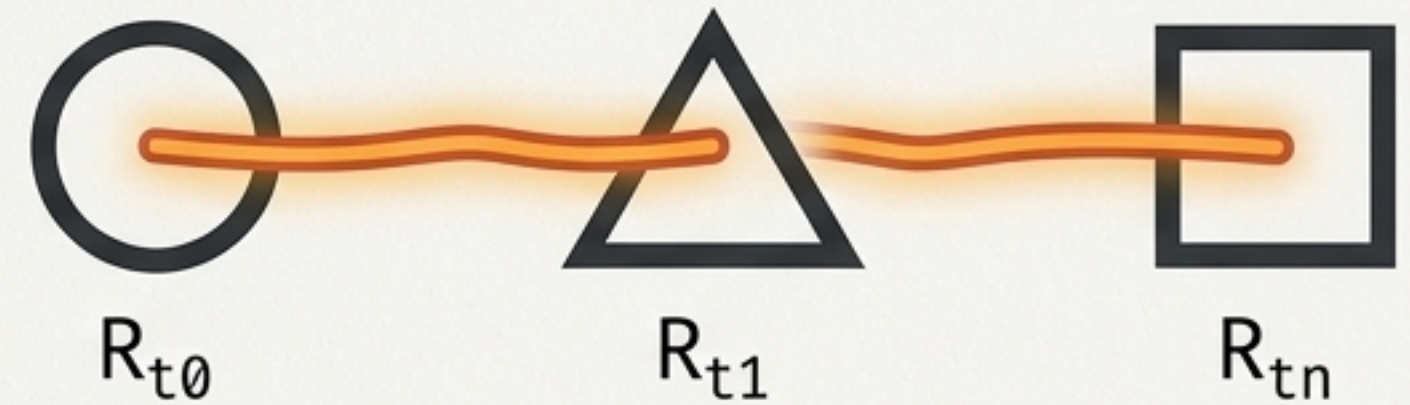

The architecture of acceptance

Acceptance vs Projection

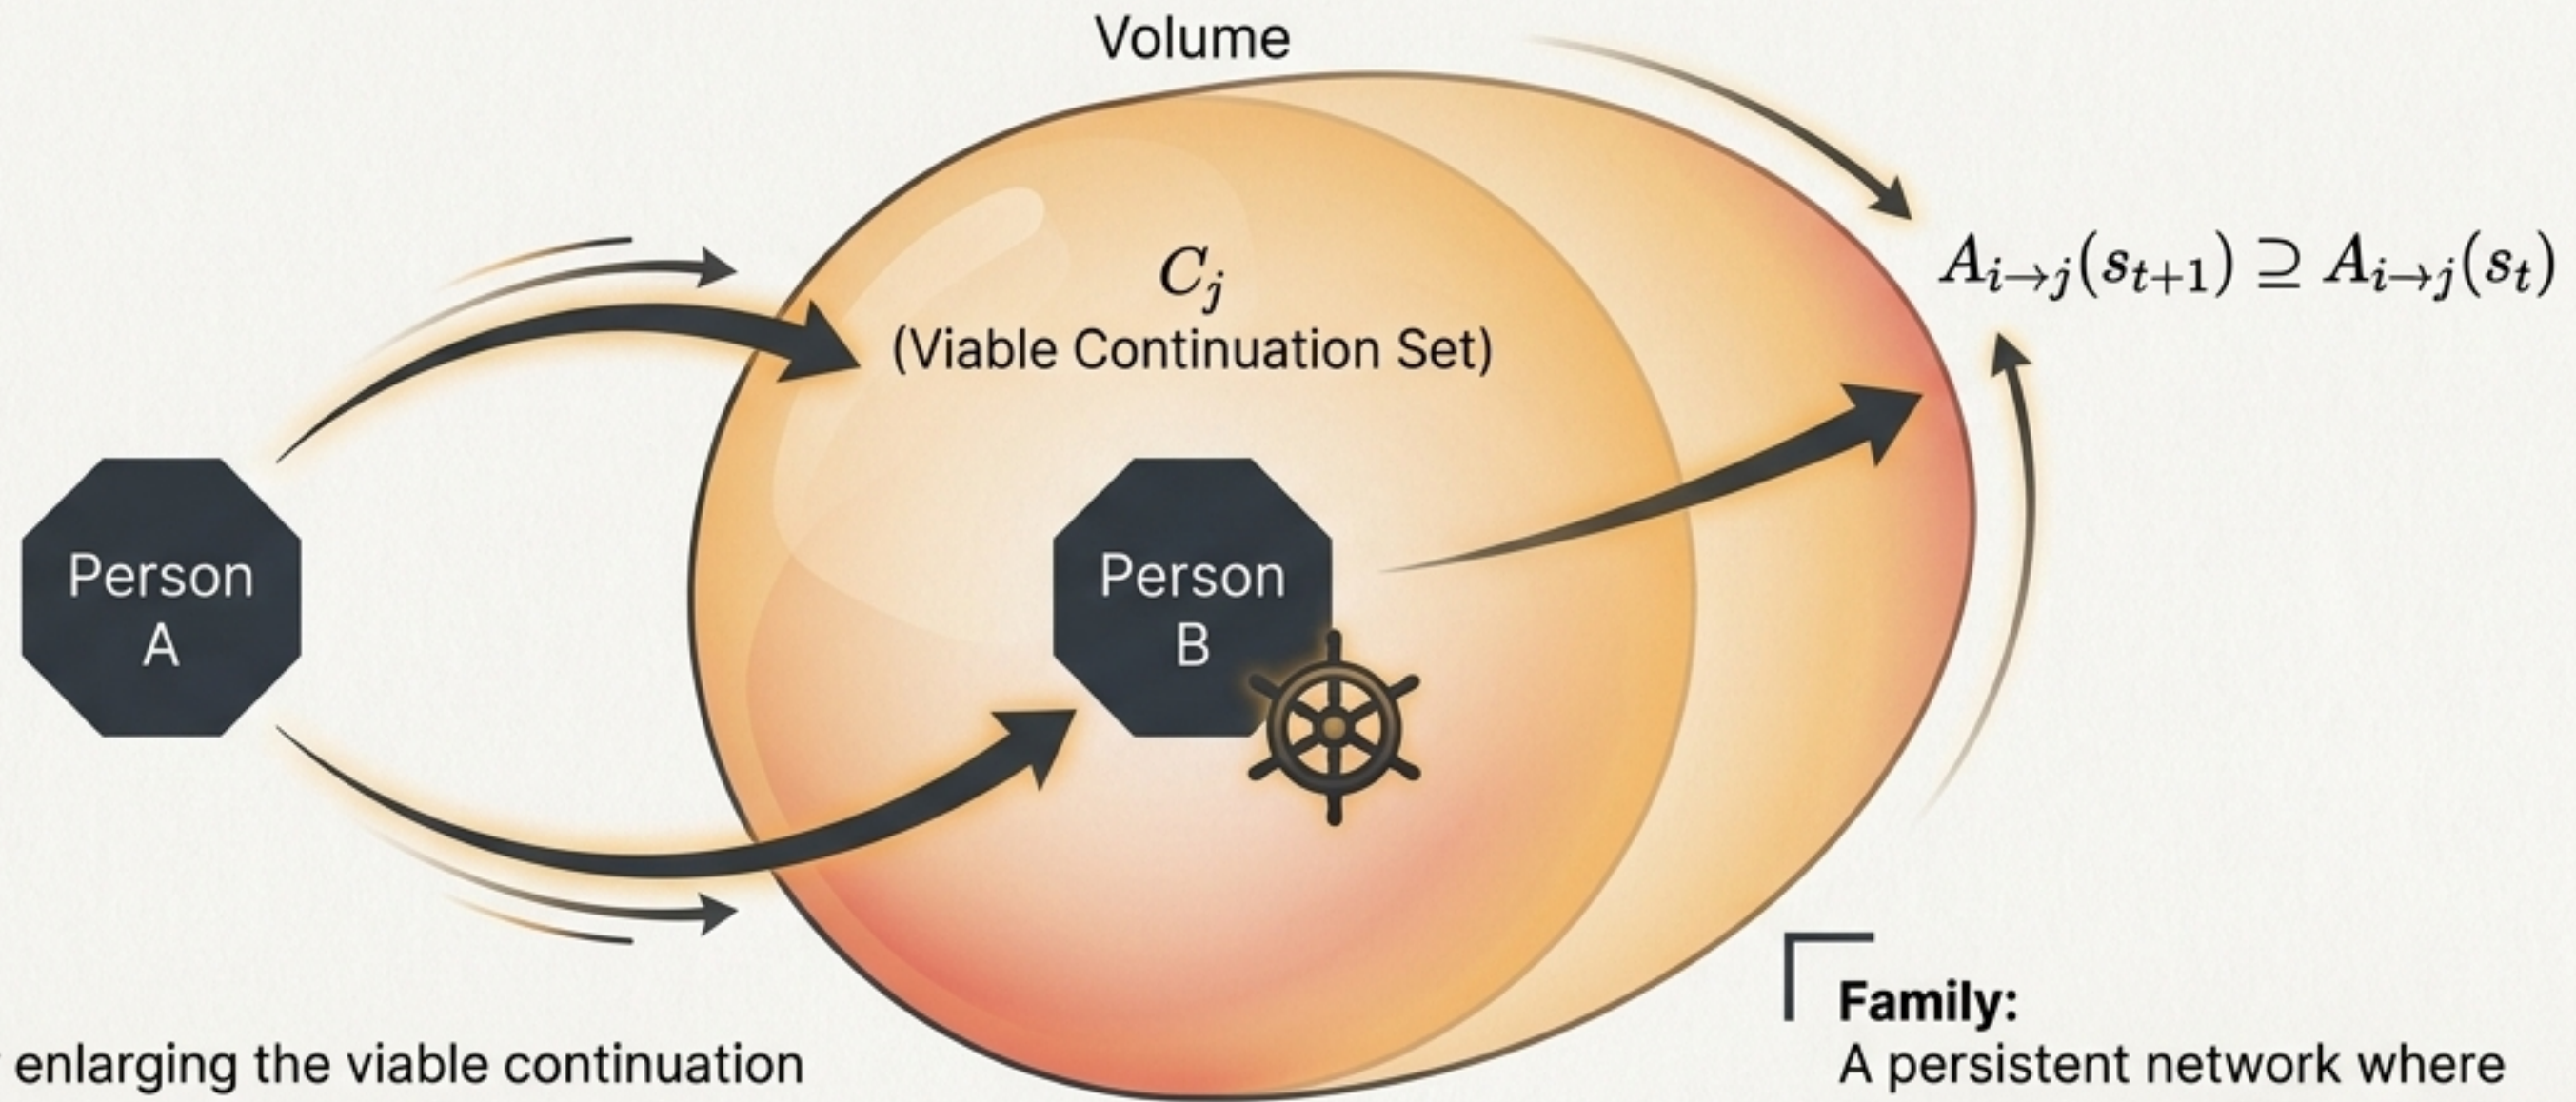

Definition 3: Admitting a state as evidence without requiring its prior conversion into a preferred state.

Continuity

Definition 4: Transformation with a recoverable path of answerability. A relation without answerability is merely successive.

Continuations and distributed consequence

Love:

Preserving or enlarging the viable continuation set of another, without appropriating their authority to select among those continuations.

Caveat: Mere enlargement is not love if refusal is punished or control is transferred.

Family:

A persistent network where changes in the viable continuations of one member alter the practical deliberation of another ($\Delta C_j \Rightarrow$ changers ($\Delta C_j \Rightarrow \Delta A_i$). Distributed consequence.

The coupling weight of joint inquiry

Research 'On'	「Research 'With'」
• Unilateral authority. • Investigator's categories remain fixed. • Other person is treated as a source of observations. • Speech without causal influence (Reflexive Enter).	• Relational rehearsal. • Object of investigation AND representations remain revisable. • Revision map: $H_{ij}: (M_i, M_j, D) \mapsto (M'_i, M'_j)$ • No unilateral authority to classify evidence.

Proposition 1: If the contribution cannot alter the model, the interaction collapses to unilateral execution.

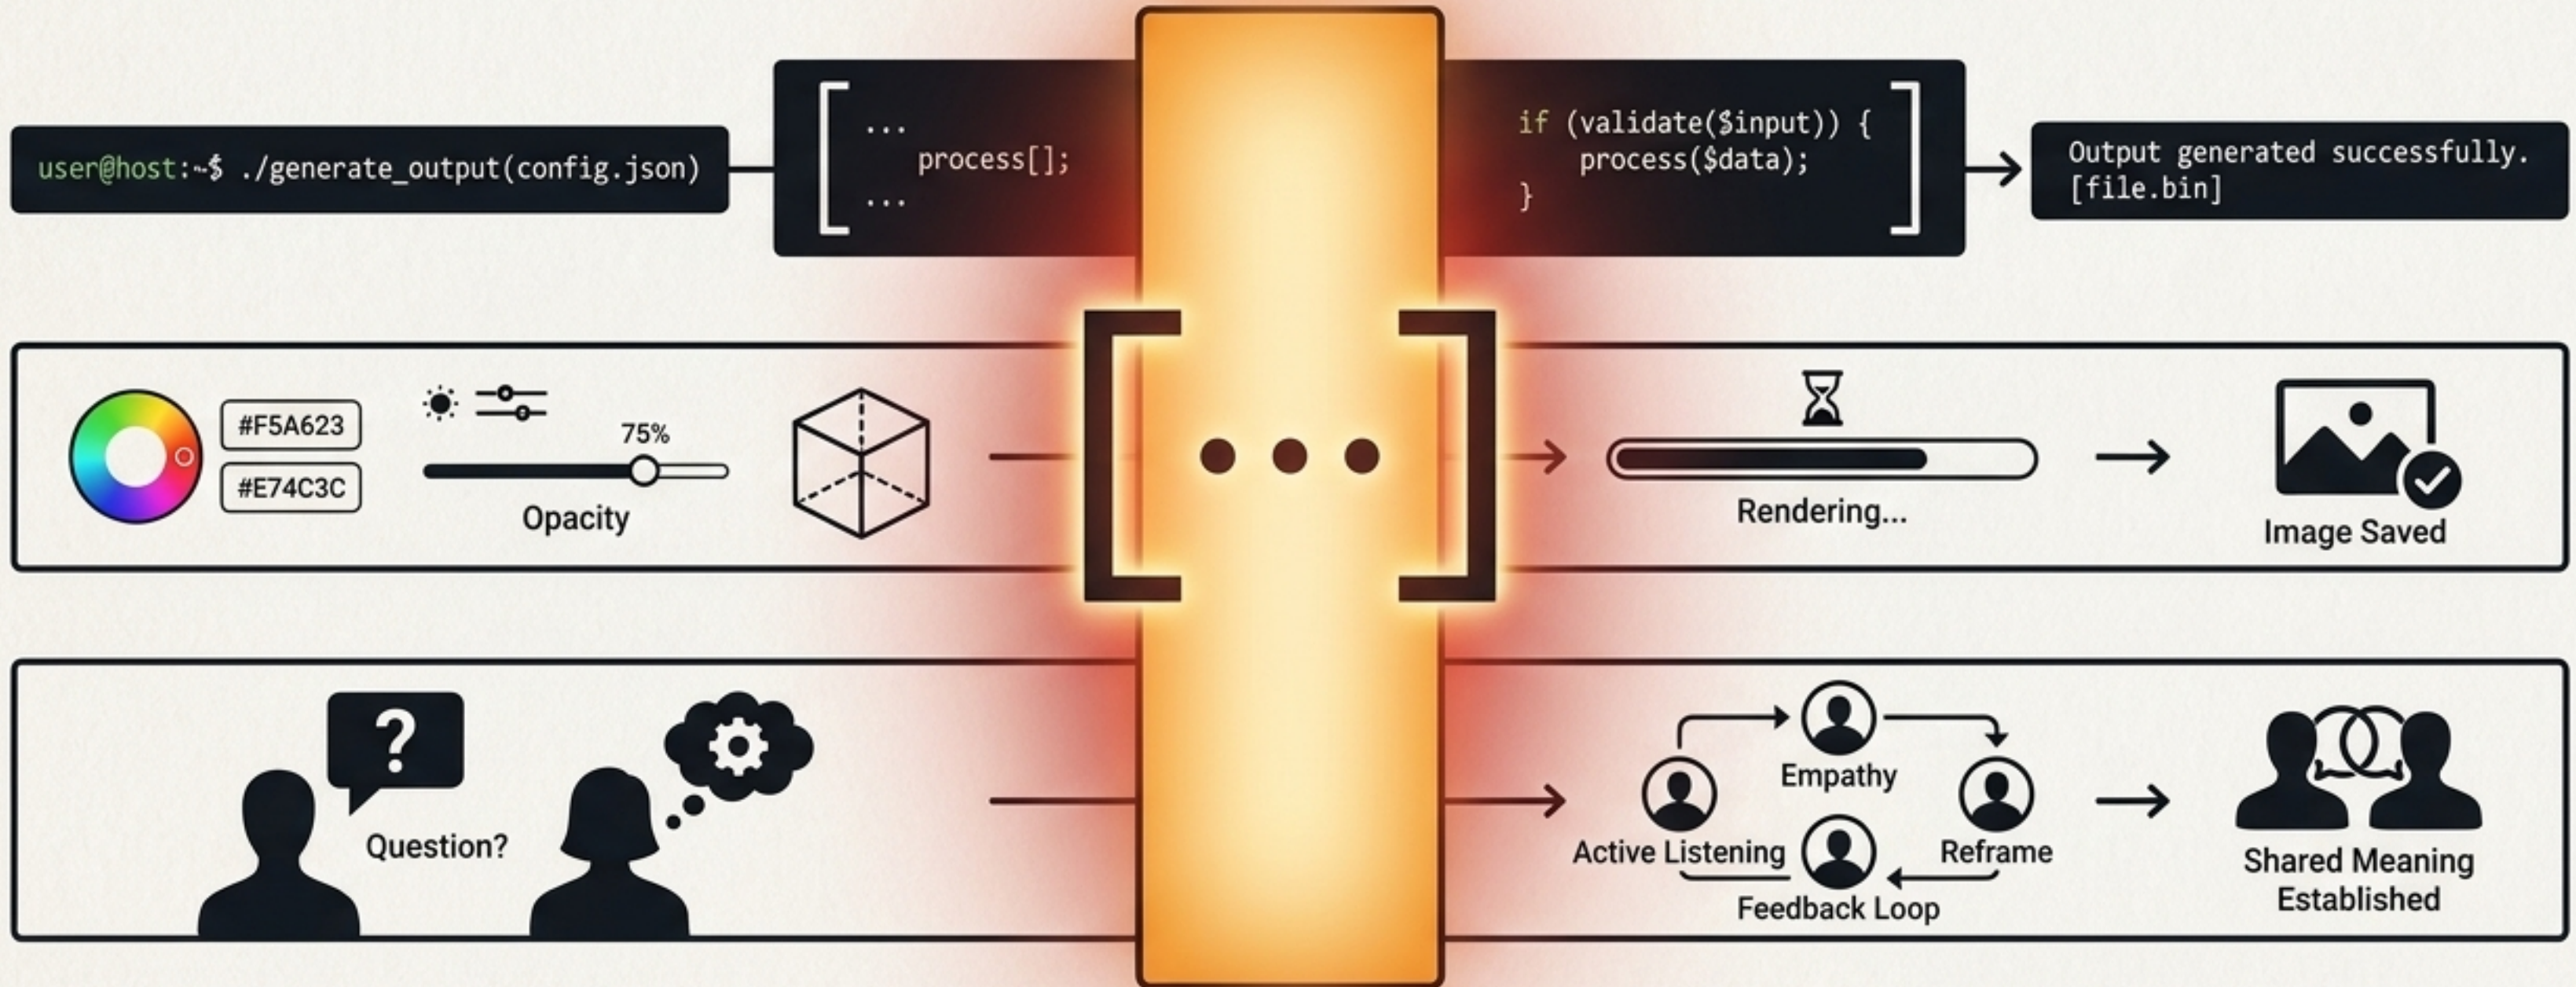

Coupling Weight measures consequence, not health. A tie where one may speak freely but consequence equals zero is the relational counterpart of displayed syntax followed by a reflexive Enter.

The structural invariant across domains

	Command Line	Phenomenology	Interpersonal
The Trigger	Abbreviation (a)	Experience (e)	Observed State (s_j)
The Intermediate Object	Quoted Term ($\ulcorner t \urcorner$)	Rendered Output ($R(\theta)$)	Shared Interpretation ($\ulcorner M_i(s_j) \urcorner$)
The Human Intervention	Text Edit	Parameter Tweak	Relational Refusal
The Execution	Shell Eval	Submit Report	Relational Action

The bridge is the shared intermediate object. In all domains, convenience masks invariants by collapsing distinctions. Voluntary limitation reintroduces friction precisely at the moment of expansion.

Corrective Permeability

The defining property of a rehearsable interface, a perceptual tool, and a loving relationship.
The capacity of a representation to be altered by the reality it represents before action is taken.
Implementation visibility is not a defect to be engineered away. It is the reason the abstraction exists.
